

Windows 10 Enterprise and Enterprise Mobility + Security solutions

More **mobile**. More **flexible**. More **secure**.

You need technology that keeps your company mobile and flexible, without giving your employees headaches or leaving you open to attacks. Windows 10 Enterprise is a great start. It's the most secure Windows ever, with features that make it easy to manage employee devices. The Microsoft Enterprise Mobility + Security (EMS) solution helps you take the next step, by managing and protecting users, devices, apps, and files, no matter where they are.

Keep your information highly secure and achieve more in a mobile-first, cloud-first world.

With Windows 10 Enterprise + EMS, you can detect threats before they cause damage and manage all your devices from a single console. Your information is safer, your employees are more productive, and you save money by purchasing Microsoft's Secure Productive Enterprise suite.

"With Microsoft's [EMS] we have a great opportunity to use the latest technology to deliver the best services to our internal team. And when our team has the information they need, when and where they need it, it makes it that much easier for us to delight our customers."

Protection against identity attacks

Hackers are constantly trying to impersonate your users and crack into your systems. Windows 10 Enterprise uses built-in authentication to reject those impostors and make sure only your authorized users get access. By combining Windows 10 Enterprise with EMS, you can ramp up this protection and set specific policies about which users—and which devices—can access your apps.

Highly secure data, everywhere

Windows 10 Enterprise uses some of the strongest encryption available to help keep data secure when it's on a PC or device. And with Windows Information Protection built in, it's easy to define the policies that allow users to access your systems and apps.

EMS extends this to help protect your information as it moves across devices and the cloud. It keeps files encrypted when they're shared with people inside and even outside your organization. It also helps to safeguard information stored in Office 365. And EMS uses behavioral analytics to detect threats, so you can head off attacks and keep damage to a minimum.

Simplified sign-on

With EMS, your employees can use a single username and password to sign on to all their Microsoft services and apps. They'll be more efficient and productive without having to sign on over and over again.

Device management made easy

With Windows 10, administrators can use one console to manage and update your organization's devices. EMS adds another layer, enabling larger enterprises to configure Windows across all users and devices. IT managers will be thankful that their jobs are simpler, and enterprises will rest easy knowing devices are in compliance and more secure.

Faster, easier migrations

By moving to the cloud and deploying new applications, your enterprise can be more efficient and productive. Microsoft FastTrack makes this migration easy for IT departments, even in enterprises with thousands of PCs and devices. FastTrack helps you plan successful rollouts, ramp-up new services, and onboard new users.
