

Windows 7 to 10 Migrations

Windows 7 is now End of Life. Action is critical.

What is Windows 7 End of Life?

Windows 7 was released in October 2009. After ten years, its support lifecycle has ended. Microsoft will no longer provide feature updates or security patches for Windows 7.

Organizations may continue using the operating system, but without updates to combat evolving threats and new viruses, malware and ransomware will leave these systems vulnerable.

Windows 7 to 10 Workshop: Step 1

We have developed a no-cost workshop to talk with you about Windows 7 End of Life considerations and the many migration options to get to Windows 10.

This is your opportunity to learn about Windows 10 from **the industry experts**. In this customized workshop, we discuss

- License upgrades included with Microsoft 365
- Mitigating application compatibility issues
- Windows Analytics evaluation of existing hardware
- End user communication best practices
- Windows 10 Security
- Virtual Deployment Infrastructure
- Return On Investment (ROI) calculations
- Deployment strategies using Windows AutoPilot
- Network infrastructure preparation

PEI is your Trusted Technology Advisor

We have been in business for over 30 years and have successfully completed more than 7,000 IT projects. Our company is a top-rated Microsoft partner, and we maintain 6 Gold Competencies—more than any other partner focused on small and mid-sized businesses.

Why Upgrade to Windows 10?

- ✓ **Security** data storage and connections to services
- ✓ **Compliance** meet required industry system settings
- ✓ **Speed** optimization makes Windows 10 the fastest yet
- ✓ **Compatibility** Application compatibility is streamlined
- ✓ **Interface** designed by user feedback. Loved by all.
- ✓ **Deployment** streamlined with minimal user impact
- ✓ **Training** hours of recorded training for users
- ✓ **Cost** license included as part of Microsoft 365

The Windows 10 Story

Windows 10 was designed to be the most secure and user-friendly operating system ever.

Microsoft was determined to incorporate as much user feedback as possible with this new operating system, making Windows 10 the preferred operating system for both personal and business users alike.

Microsoft uses artificial intelligence and a team of more than 4,000 security practitioners to analyze threats and automatically deploy mitigations globally, typically before other vendors even see the new threats.

Your Last Windows Upgrade

After Windows 10, there will be no more major upgrades. Instead of big releases, there will be regular improvements released twice a year.

With Windows 10, you'll never have to undergo an extensive migration again.
